Bibimcad add-in install status

Machine user: **atis** · Revit 2023 · Wednesday, October 14, 2026

Status: Build and file setup are done. Waiting to open Revit 2023 and choose **Always Load**.

Done

Step	Location	Result
Built the add-in	`C:\bibimcad-builder-main\src\Bibimcad.Addin\bin\Debug\Bibimcad.Addin.dll`	True
JSON library next to the DLL	`C:\bibimcad-builder-main\src\Bibimcad.Addin\bin\Debug\Newtonsoft.Json.dll`	True
Manifest in the folder Revit 2023 scans	`C:\Users\atis\AppData\Roaming\Autodesk\Revit\Addins\2023\Bibimcad.addin`	True
Manifest points at the DLL	`<Assembly>C:\bibimcad-builder-main\src\Bibimcad.Addin\bin\Debug\Bibimcad.Addin.dll</Assembly>`	Correct

Next: test in Revit

1. Close every Revit window. Revit reads add-ins only when it starts.
2. Open **Revit 2023**. Do not use Revit 2024 or 2026; this DLL is built for 2023.
3. A security message asks whether to load Bibimcad. Choose **Always Load**.
4. Look for the **Bibimcad** tab on the ribbon. It has a **K1 Workflow** panel with two buttons:
    - **01 Inspect**: reads the project state file.
    - **02 Coordinates**: reads the linked CAD position and saves it.

Before clicking the buttons

The buttons read and write this file. It is not checked yet:

`C:\Bibimcad\data\project_state.json`

If it is missing, copy the template from the project folder:

```
New-Item -ItemType Directory -Force -Path C:\Bibimcad\data
Copy-Item C:\bibimcad-builder-main\data\project_state.json C:\Bibimcad\data\project_state.json
```

The Bibimcad tab still appears without this file. Only the buttons fail.

If the Bibimcad tab does not appear

Check	Where
File name is really `Bibimcad.addin`, not `Bibimcad.addin.txt`	File Explorer → View → File name extensions
Bibimcad log	`C:\Bibimcad\logs\Bibimcad.log` No file means Revit did not start the add-in.
Revit journal, search for `Bibimcad`	`C:\Users\atis\AppData\Local\Autodesk\Revit\Autodesk Revit 2023\Journals`
Accidentally chose **Do Not Load**	Restart Revit 2023. If the prompt does not return, remove and copy `Bibimcad.addin` again.

After code changes

```
cd C:\bibimcad-builder-main
dotnet build -p:RevitInstallDir="C:\Program Files\Autodesk\Revit 2023"
```

Then restart Revit 2023. The manifest does not need to change while the DLL path stays the same.
